V90N-DP SERIES

Swash-plate Type Axial Piston Variable Displacement Double Pump

(Original HP3V-D Series)

V90N-DP variable axial piston double pump is designed for the high pressure open circuit.

Displacement (cc/rev):	180×2	212×2	230×2	252×2
Nominal pressure (bar):	380	350	350	350
Max. pressure (bar):	420	392	392	392

Contents

Technical Data	02

V90N 180DP type	
• Control principle	05-06
• Installation size	07-08
V90N 212DP/230DP type	
• Control principle	09-10
• Installation size	11-12
V90N 252DP type	
• Control principle	13-14
• Installation size	15-16

Features

- Variable axial piston double pump design for the open circuit.
- Various controllers available: hydraulic and electrical control design available, which can combined the different controllers of flow control, electric proportional control and power control.
- High efficiency, High working pressure (380 bar) and long lifetime.
- Compact design with PTO Power port drive for connecting different auxiliary pumps.
- Special pump housing structure design meets the low noise requirements.
- More suitable for mobile machinery like excavators, cranes, drilling rigs and so on.

Technical data

Size	V90N 180DP	V90N 212DP	V90N 230DP	V90N 252DP
Displacement(cc/rev)	180×2	212×2	230×2	252×2
Speed	Rated speed (rpm) ^{*1}	2000	1800	1800
	Maximum speed (rpm) ^{*2}	2400	2000	2000
Pressure	Rated pressure (bar)	380	350	350
	Maximum pressure (bar)	420	392	392
Maximum torque (N.m)	1200	1500	1800	2100
Case volume (L)		10		
Suction port pressure (abs bar)		0.7 ~ 2		
Drain pressure (bar)		1		
Max. drain pressure (bar)		3		
Mass (Kg)	262	270	270	320
Temperature range (°C)		-20 ~ 95		
Hydraulic fluid viscosity range (mm ² /s)		10 ~ 1000 ^{*3} (optimum viscosity range 16 ~ 36)		

1 Steady state suction pressure should be 0 bar and above (at normal condition);

2 If suction pressure less than 0 bar, Boost pressure should be required;

3 In case of 200-1000mm²/s, please allow system to warm up before using machine.

V90N 180DP Control principle

• E1 Electro-proportional displacement control principle

Electro-proportional displacement control: With pilot-pressure-related control, the pump displacement is adjusted in proportion to the pilot pressure. Basic position without pilot signal is V_g min, which includes the mechanically depressurized basic position $V_{g\min}$. With increasing pilot pressure the pump swivels to a larger displacement. The necessary control power is taken from the operating pressure or the external control pressure applied to port P. If the pump is to be adjusted from the zero basic setting or from a low operating pressure, port P must be supplied with an external control pressure of at least 30 bar, maximum 50 bar.
