

2.3.2

HYDRAULIC PILOT CONTROL UNIT OF PLATE DESIGN

Type: H-2HV

Benefits:

- Progressive, sensitive control
- Precise and play-free control characteristics
- Low actuation force at the lever
- Rust-free plunger

Features

1. Function:

- Precise linear control
- Perfect adjustment characteristic
- Easy and flexible operation

2. Applications

Horizontal directional drilling

Excavator

Wheel loaders

Drilling rigs

Functional description, section view

· Hydraulic operating diagram

Hydraulic pilot control unit basically comprise of a control lever, two pressure reducing valves and a housing.

In the non-actuated condition, the control lever is held in the neutral position by the return spring. The control ports are connected to tank port T. When the control lever is deflected, the plunger is pressed against the return spring and the control spring. The control spring moves the control spool downwards and closes the connection between the control port and tank port T. At the same time, the control port is connected to port P. The control phase starts as soon as the control spool finds its balance position between the force from the control spring and the force of the hydraulic pressure in the control ports. As the result of the interaction of the control spool and the control spring the pressure in the control ports is proportional to the stroke of the plunger and thus to the position of the control lever.

This pressure control as a function of the control lever position and the characteristics of the control spring enables the proportional hydraulic control of directional valves and high response control valves for hydraulic pumps and motors. A rubber gaiter protects the mechanical parts in the housing against contamination and ensures that the pilot control units can also be used for the arduous applications.

Technical data

Housing material		Al
Inlet pressure		bar Up to 50
Back pressure at port T		bar Up to 3
Control fluid flow (P to 1-2)		L/min Up to 16
Hysteresis		bar Up to 1
Pressure fluid	¹⁾ suitable for NBR seals ²⁾ suitable for FKM seals	Mineral oil (HL, HLP) ¹⁾ to DIN 51524 Phosphate ester (HFD-R) ²⁾
Pressure fluid temperature range		°C -20 to +80
Viscosity range		mm ² /s 10 to 380
Degree of pressure fluid contamination		Maximum permissible degree of contamination of the pressure Maximum permissible degree of contamination of the pressure. Fluid is to NAS 1638 Class 9. We, therefore, recommend a filter with a minimum retention rate of $\beta_{10} \geq 75$ fluid is to NAS 1638 Class 9. We, therefore, recommend a filter with a minimum retention rate of $\beta_{10} \geq 75$.
Max. permissible operating torque at lever		Nm 10 in operation
Weight		kg 1.0 to 1.75
