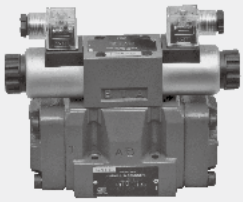
2.13

4/3, 4/2 and 3/2 directional valves of pilot operated

Type WEH 10, 16, 25 and 32

Sizes 10 ～ 32
Up to 350 bar
Up to 1100L/min



Contents

Features

- Valves used to control the start, stop and direction of a fluid flow
- Electro-hydraulic operation (WEH)
- Porting pattern conforms to DIN 24 340 form A, ISO 4401 and CETOP-RP 121 H
- Wet pin DC or AC solenoids, optional
- Hand override, optional
- Electrical connections as an individual or central connection
- Spring centered, spring or hydraulic offset.

Function and configurations

Valves of type WEH are directional spool valves with electro-hydraulic operation. They control the start, stop and direction of a flow.

Solenoid valves used for pilot control are with wet AC or DC solenoid available; Main valves apply spring centering and spring reset or hydraulic reset; with or without Switching time adapters; with or without stroke regulators for main valves; back pressure valves may be installed in main valves; throttle may be installed; pressure reducing valves may be installed when working pressure exceeds 250bar.

The valve mainly consists of main valve body(1), main valve spool(2), one(or two)reset spring (3) with one(or two) pilot solenoid valve of solenoid. Main valve spools(2) is held in the neutral or in the initial position either by the springs or by means or pressure. Pilot solenoid valves (4) may select wet-type AC or DC solenoids(5) and pilot solenoid valves are able to control the switching of main valves.

There are four patterns on supply and drain of control oil, see the function diagram. Following are descriptions of various types of valves:

1. Main valves are 4/3-way directional valve with spring centring of the control spool.

Main valve spool(2) is held in the neutral position by means of two return springs. And two spring chambers(6) are connected with tank through pilot solenoid valves.

When one of the two ends of the main control spool (2) is pressurised with pilot pressure, the spool is moved to the switched position. The required ports in the valve are then opened to flow.

When the pilot pressure is removed, the spring on the opposite side to the pressurised spool area causes the spool to return to its neutral or initial position.

Function and configurations

2/4 way directional valves

(this kind of valve has four different structures and Types)

1. Type WEH.../...

This kind of pilot valve and main valve have a reset spring each, resetting by spring force.

2. Type WEH...H.../...

This kind of valve has a reset spring, making pilot valve spool stay in initial position. Main valve spools change directions under effect of pressure oil.

3. Type WEH...H.../O...

This kind of valve has two solenoids. There are no reset springs in pilot valves and main valves, thus using solenoids and pressure oil to make pilot valves and main valve spools change directions. Therefore, at least one solenoid shall be under working sate.

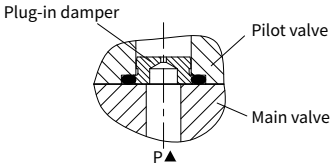
4. Type WEH...H.../OF...

This kind of valve has two solenoids and locators which makes pilot valve spools stay in working position(impulse valves). Main valve spools have no locating devices , moving downward to corresponding working positions under effect of pressure oil.

Structure 2, 3 and 4 aforesaid are hydraulic reset. Main valve spools can stay in the working position only under the effect of pressure oil.

Throttle insert:

The use of a throttle insert is required if the pilot oil supply in the P channel of the pilot valve is to be limited . This throttle is inserted in the P channel of the pilot valve.



Structure chart of plug-in dampers

Function and configurations

Pilot oil supply:

1. Type WEH10

(1) Conversion between internal supply and external supply:

P channel on the top of main valve bodies with M6 bolt(2) is external supply and with M6 bolt (2) dismounted is internal supply.

(2) Conversion between internal drain and external drain:

Dismounting plug screws(1) and installing M6 bolt(2) is external drain; dismounting M6 bolt(2) is internal drain.

2. Type WEH16

(1)Conversion between internal supply and external supply:

Dismounting plug screw(10) form P channel on the sidesurface of main valves and installing M6 bolt(9) is internal supply. Dismounting M6 plug bolt(9) is internal supply.

(2)Conversion between internal drain and external drain:

Dismounting plug screw(10) form T hole on the top of main valves and installing M6 plug bolt(9) is internal drain. Dismounting M6 bolt(9) is external drain.

3. Type WEH25

(1)Conversion between internal supply and external supply:

P channel on the top of main valve bodies with M6 bolt(6) is external supply and with M6 bolt (6) dismounted is internal supply.

(2)Conversion between internal drain and external drain:

Dismounting plug bolt(6) form T hole on the top of main vlaves and installing M6 plug bolt(9) is internal drain. Dismounting M6 bolt(9) is external drain.

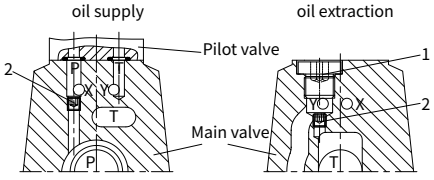
4. Type WEH32

(1)Conversion between internal supply and external supply:

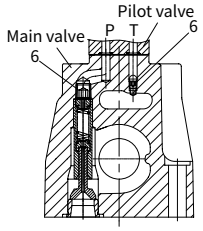
Dismounting plug screw(9) form P hole on the undersurface of main valves and installing M6 bolt(9) is internal supply. Dismounting M6 plug bolt(9) id internal supply.

(2)Conversion between internal drain and external drain:

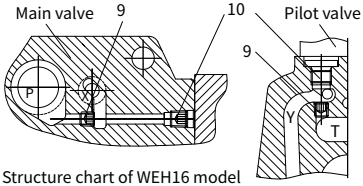
Dismounting plug screw(9) form T hole on the top of main valves and installing M6 plug bolt(9) is internal drain. Dismounting M6 bolt(9) is external drain.



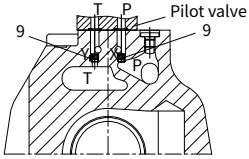
Structure chart of WEH10 model supply and discharge



Structure chart of WEH25 model supply and discharge



Structure chart of WEH16 model supply and discharge



Structure chart of WEH32 model supply and discharge

Attention:

X port on base plates must be blocked when internal supply occurs and Y port on base plates must be blocked when internal drain occurs.

Function and configurations

Switching time adjustment:

In order to influence the switching time of the main valve a double throttle check valve has to be fitted between pilot valves and mian valves to control oil supply from pilot valves into main valve spools, thus adjusting the switching time of main valves.

Regulating bolt rotation clockwise, the time for switching of main valves is long, otherwise the time is short.

The throuttle check valve has two kinds: meter-in throttling and meter-out throttling. If there is a need of changing meter-in throttling into meter-out throttling, just install the valve after rotating 180° around the longitudinal axis again and then install pilot valves.

14- Adjustable bolt
15- Seal ring support plate
16- Set screw M5×L GB/T70.1-10.9 grade, the length of L is determined by height stacked, tightening torque 8.9 Nm.

Pressure reducing valves:

The pressure reducing valve (8) must be used it the pilot pressure is higher than 250 bar (for type 4WEH 22 ...: 210 bar).Pressure reducing ratio of constant-ratio pressure reducing valves(D1)1:0.66.

Pressure reducing pressure of constant-ratio pressure reducing valves shall not exceed 40bar.

Minimum control pressure of technical specifications shall improve 1/0.66=1.515 after installing bottom plate pressure reducing valves.

Constant-ratio pressure reducing valves shall not be used when controlling internal oil drain and using back pressure valves(P0.45) with control pressure decreased to 3bar.

Function and configurations

Back pressure valve:

Valves controlling oil inner supply with unloading passages, such as C, Z, G, H, P, S, T and V, In valves with zero pressure circulation and internal pilot oil supply,a back pressure valve (9) must be installed in the P-channel of the main valve to build up the minimun pilot pressure. The pressure differential of the back pressure valve must be added to the pressure differential of the main valve (see characteristic curves) in order to determine the acutal value. The opening pressure of this valve is approx. 4.5 bar. NG10 valves do not have back pressure valves.

	W	-	-	20	20

Performance limit

The switching function of valves depends on filtration due to adhesive effects. To achieve the specified permissible flow values, we recommend full-flow filtration with 25 µm. The flow forces acting within the valves also have an influence on the flow performance. With 4-way directional valves, the specified flow data are therefore valid for normal applications with 2 directions of flow
(e.g. from P to A and simultaneous return flow from B to T) (see table).
If the fluid flows in only one direction, the permissible flow may be significantly lower in critical cases (e.g. use of a 4-way directional as 3-way directional valve with port A or B blocked).

Type: WEH10 electro-hydraulic directional control valve

3-position valve, spring centering			
Flow(L/min)	Pressure stage(bar)		
Symbol	200	250	315

Hydraulic-return 2-position valve					
HC, HD, HK, HZ, HY	1100	1040	860	750	680
When control oil is supplied internally and pressure valve is equipped, the flow of spool valve's enginery of C, G, T, F, P, H, V and Z Types reaches 180L/min.					

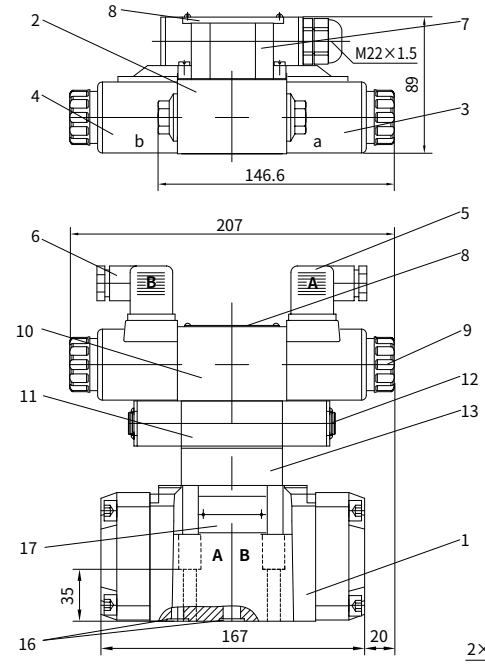
Pilot-operated solenoid valve

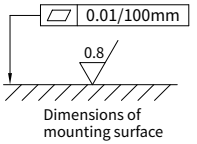
Use a four-way directional control valve with size of 6 to be a pilot valve. Spool valve is kept at the middle position or initial position by a spring and working position by the solenoid or positioner.
This valve applies wet DC or AC solenoid. Enginery of pilot-operated solenoid valve applied for main valve with different engineries are as the table below:

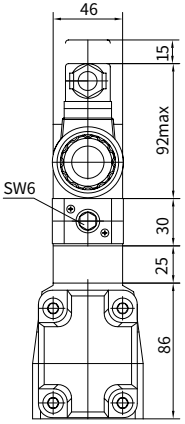
Main valve	**Pilot-operated solenoid valve**
Spring-centering 3-position valve/ transformed 2-position valve	Use 4WE6J-6X/...3-position valve/ 4WE6JA... 4WE6JB...
Structure of 2-position main valve: Y.../...and HY.../... B.../...and HB.../...	Use 4WE6Y-6X/...2-position valve
2-position valve: A, C, D, K and Z Type functions HA, HC, HD, HK, HZ Type valves	Use 2-position valve with D Type enginery Types of main valve's structure: spring return 4WE6D6X/.. No returning spring 4WE6D-6X/O... No returning spring, with a positioner 4WE6D-6X/OF...

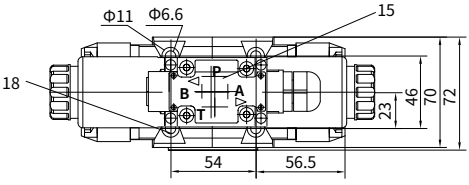
Unit dimensions

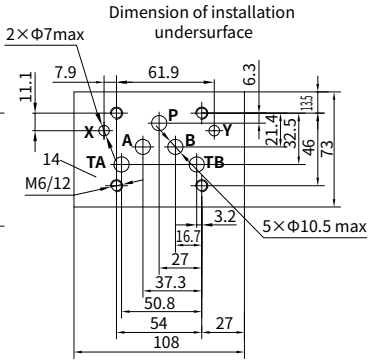
Unit dimensions of WEH 10 electro-hydraulic directional control valve











1 Main valve
2 2-position valve, with one solenoid
3 Solenoid a
4 Solenoid b
5 Plug of solenoid a
6 Plug of solenoid b
7 Junction box with lead and light, M22×1.5 interface
8 Label of pilot valve
9 Manual button
10 Double-solenoid 2-position valve, double-solenoid 3-position valve
11 Switching time regulator
12 Section flow of Switching time regulator "full open"
13 Reducing valve
14 Arrangement of main valve's oil outlets (attachment face of valve)
15 Position of leading oil outlet
16 O-ring of A, B, P and T outlets: 12×2; O-ring of X and Y: 10.82×1.78

TA and TB can be selected to be an oil returning arbitrarily

17 Nameplate
18 Bolt4-M6×45 GB/T70.1-2000-10.9 grade Moment M_A=15.5Nm (bolt of vertical stack components combined with electro-hydraulic directional valve is selected according to actual height)

If you need connecting baseplate, must order separately.

Types: G534/01; G534/02; G535/01; G535/02; G536/01; G536/02

Unit dimensions
